

ARTIST'S STATEMENT (2004)

Chow Suk Fan, Josephine

Concepts of my paintings

Visual Art is a living Culture, a reflection of the civilization of human creativity and mental power. Human lives within a particular time and space; on a little planet of the universe. Our wisdom raises from our own strength and continuous efforts, so that we can be released from "Stupidity" and "Ignorance", tackles the boundary of Nature. Human do have a kind of energy that enforcing the creativity.

Passed the two World Wars, and looking forwards into the New Millennium, Science, Technology and Medication will develop rapidly and will achieve much greater success. Human body has the potential, whether physically, psychologically or spiritual which could support the development and continuation of human being. Examining phenomena of nature, such as wind, thunderstorms, water, electricity, they all have hidden energy, not to mention atomic and nuclear energy. Even if we try to understand a bit more about our Universe, we need to have some more break-through both in physical and mental power. "Energy" contains a deep sense of transformation and invisible power. It is wonderful, and also the practical source of innovation.

The development of human mind and the quality of life brings human being forward to a new era. Material or physical energy innovate our Technology and Science; spiritual energy innovate the development of Art. Artist uses colours, lines, forms, textures and spaces to reveal both the visible and invisible.

And only ART could reveal both — the visible and invisible.
